

Photoshop® Tip: Image Resolution

To check the resolution of a file, **Image > Image Size**
For the best printing, the resolution should be 300 pixels.

Increase resolution in 10% increments for best quality and least amount of pixel distortion.

1. Change the resolution from 100 pixels to 100, then click **OK**. Repeat this step until you've reached a resolution of 300.

Tip: For a process that is repeated often, create an action to quicken the procedure.
