

Photoshop® Tip: Masking with Text

1. **File > New.**
2. Set page dimensions, then click **OK.**
3. Select **Type** tool **T** from the **Tool** palette.
4. Click **Type** tool on page and type in word.
5. **Layer > Rasterize > Type.**

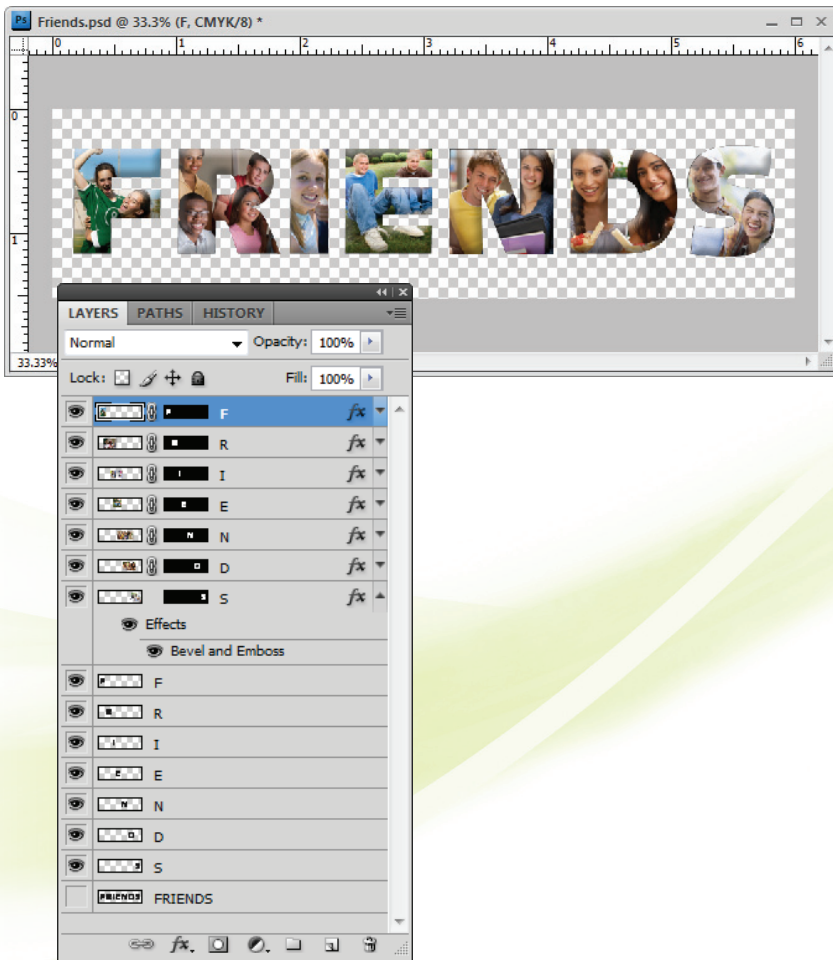

6. Select the **Marquee** tool  from the **Tool** palette. Draw a box around the letter of your choice.
7. **Layer > New > Layer via Copy.** Repeat for the other letters. Name each layer its respective letter.
8. Drag images into layout by selecting the **Move** tool and dragging image into the appropriate screen. (Holding **Shift** key while dragging will place the image in the center of the page.)
9. While holding down the **Ctrl** key (**Option** on a Mac), click a layer on the **Layers** palette to select the outline of the text. *To select multiple layers, hold down the Shift key.*
10. Select the **Layer Mask** icon on the **Layers** palette.
11. Continue applying the mask to all of the pictures.

Tip: To add Center Guidelines, select the background layer, then move your mouse over the top of the ruler. When it changes to a pointer, you can click and drag a guideline.

12. Click the **Lock** between that layer and the layer mask.
13. Select the **Move**  tool and position the images inside of the layer masks.
14. **Image > Transform > Scale** to resize the image as necessary. To rotate the image, move the mouse outside of the selection. Once you see the double arrow, click and move to rotate.
15. **Layer > Layer Style > Bevel and Emboss**; select attributes and click **OK**. Repeat for all layers.
16. Once complete, **Layer > Flatten Image**.
